

## Peer Review Policy

The **Bioscientist Journal (ISSN: Online, 2630-7111; Print, 2630-7103)**, is a publication of the Faculty of Biosciences, Nnamdi Azikiwe University, Awka. The Bioscientist Journal publishes high-quality solicited and unsolicited articles, in English, in all areas of the Biosciences including Biochemistry, Microbiology, Zoology, Botany, Parasitology, Entomology, Molecular biology, Genetics and all spheres of Bioscience and the Bioenvironment. The Bioscientist Journal published its first volume in 2013.

All manuscripts submitted to The Bioscientist Journal are peer reviewed. The Bioscientist Journal uses a double-blind peer-review process. Thus, both the reviewer(s) and author(s) identities are concealed from one another throughout the review process. All submitted manuscripts are treated as confidential documents.

The review process at the Bioscientist Journal commences with preliminary internal assessment of each manuscript for compliance to our scope and instructions to authors. This task is performed by members of the Editorial Board assigned to the specialization most relevant to the manuscript. The manuscript is subsequently assigned to two independent and competent reviewers. Reviewers' comments and analyses by competent Editorial Board members are made known to the author(s). Publishable Manuscripts as recommended by reviewers may then go through a second, sometimes third phase of processing and interaction between authors and the Editorial Board until the manuscript is accepted for publication. Unpublishable manuscripts are rejected and the authors notified promptly. All publication decisions are finally, made by the journal's Editor-in-Chief based on the reviewers report, decision of the Editorial Board and final vetting by the Editor-in-Chief.

Even though the Journal imposes some page charges on authors, publication of an article in the journal is not contingent upon the author's ability to pay the charges. Neither is acceptance to pay the handling fee a guarantee that the paper will be accepted for publication.
